E-ConsentPro mobile at a glance

The software is based on a locally installed **client server solution** accessed user-specifically by the respective user.

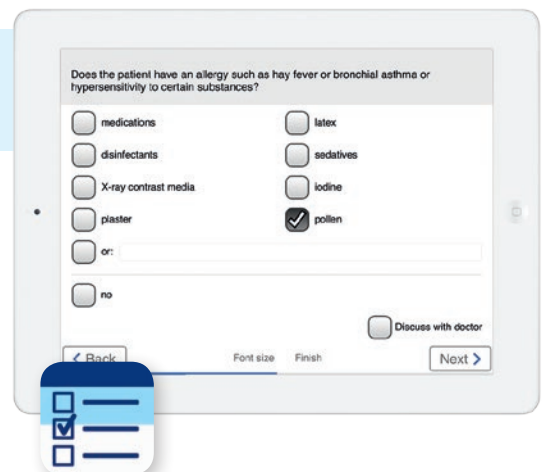

Selection of forms: The application for nursing staff/ doctor's assistants

- Access to more than 2,000 informed consent forms of the Diomed and proCompliance product ranges in up to 20 languages
- Selection of educational films possible if indicated
- Possibility of integration into a hospital or doctor's information system:
 - Direct allocation of forms
 - Integrating patient and institutional data
- Other features: Bar code issue, supplementary texts, logo integration etc.

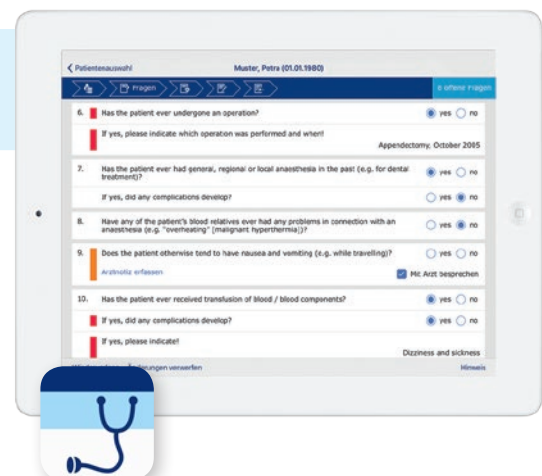

Mobile patient history: The application for patients

- Digital patient history with confirmation prompt
- Simple handling:
 - Answering individual questions step by step
 - Displaying the surface in the allocated form's language
 - Variable font size
- Possibility of integrating educational films to provide better understanding of the procedure
- Other features: Bar code issue, supplementary texts, logo integration etc.

Mobile patient information: The application for doctors

- Overview of the patient history data even before the patient-doctor discussion with an indication of the risks
- Direct links to relevant Thieme eRef information
- Possibility of individualising the form by adding handwritten notes:
 - Entering and marking certain aspects
 - Freehand sketches and integration of your own templates for sketching
- Electronic signature
- Generating a PDF/A document for digital filing
- No data saved to the mobile device

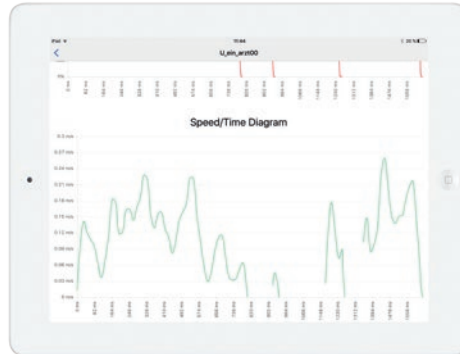

Electronic signature

The electronic signature is of comparable conclusiveness to signed documents.
In the technology used by E-ConsentPro, the electronic signature consists of two components:

Static image of the signature

Biometric features of the signature

- Increase in speed
- Pen pressure
- Writing speed

In addition, the electronic signature is encoded and is fixed permanently to the document so that manipulating the document is impossible.

Benefits of mobile patient information with E-ConsentPro mobile

Digital patient history

Due to location-independent patient information, the doctor has more time for the individual patient-doctor discussion itself.

Educational films

Integration of appropriate educational films achieves a higher degree of patient satisfaction by providing a better understanding for the procedure

Handwritten comments

Individualising the information form by marking, freehand sketches, etc.

Electronic signature

Optimised processes by means of a digital paperless work flow from patient history to filing

Process and work flow optimisation

Optimised processes by means of a digital work flow and reliable process documentation

Cost-efficiency

Cost benefits by foregoing procurement and inventory management and lower process costs due to the digital work flow

Security

Data protection compliance by means of secure data management on the server and preparation of PDF/A documents for filing

Efficient time management

Better understanding of the procedure on the patient's part and more time for the individual patient-doctor discussion

Technical requirements

- Local server installation
- Wi-fi
- Mobile terminals
- Interface to the hospital or doctor's information system (optional)
- Digital filing system (optional)
